

Claim 8 (Twice amended) A housing, fluid always under pressure in said housing, a dispensing means disposed within the confines of said housing and including a reservoir, a reservoir inlet and a reservoir outlet in said reservoir, said reservoir outlet being disposed in said fluid under pressure, an additive in said reservoir, a biased flexible member covering said reservoir outlet and closing the same, and pump means forcing said additive out of said reservoir outlet against the bias of said flexible member, said fluid pressure ensuring that the additive will be dispensed into said fluid under pressure, a first and second housing inlet and a housing outlet for introducing fluid into and out of said housing, said first housing inlet adapted to be in communication with a cold water supply outlet and the second housing inlet is adapted to be in communication with a hot water outlet, a passageway positioned in said housing conducting the fluid to said reservoir, adjustable control means in said passageway regulating the pressure of said fluid therein, adjustable control means being disposed in said reservoir outlet for regulating the flow of said fluid out of said reservoir outlet, and a hose is being connected to said housing outlet conducting ~~water~~ said fluid to a nozzle disposed in a toilet seat..

Claim 9 (Previously presented) The housing of claim 8 wherein the nozzle is adjustable.

Claim 10 (Currently amended) The housing of claim ~~6~~ 8 further including a second outlet conducting water to a second nozzle disposed ~~on~~ in the a toilet seat.

Claim 11 (Previously presented) The housing of claim 8 wherein the said toilet seat has a hollow portion with said hose disposed therein.

Claim 12 (Previously presented) The housing of claim 10 wherein the said toilet seat has a hollow portion with said second hose disposed therein.

Claim 13 (Previously presented) The housing of claim 12 wherein the nozzles are disposed substantially opposite one another.

Claim 14 (Currently amended) A housing, fluid always under pressure in said housing, a dispensing means disposed within the confines of said housing and including a reservoir, a reservoir inlet and a reservoir outlet in said reservoir, said reservoir outlet being disposed in said fluid under pressure, an additive in said reservoir, a biased flexible member covering said reservoir outlet and closing the same, and pump means forcing said additive out of said reservoir outlet against the bias of said flexible member, said fluid pressure ensuring that the additive will be dispensed into said fluid under pressure, a first and second housing inlet and a housing outlet for introducing fluid into and out of said housing, the housing ~~is~~ being integrated with a toilet seat equipped with dispensing nozzles to be substituted for an existing toilet seat.

Claim 34 (New) A housing, fluid always under pressure in said housing, a dispensing means disposed within the confines of said housing and including a reservoir, a reservoir inlet and a reservoir outlet in said reservoir, said reservoir outlet being disposed in said fluid under pressure, an additive in said reservoir, a biased flexible member covering said reservoir outlet and closing the same, and pump means forcing said additive out of said reservoir outlet against the bias of said flexible member, said fluid pressure ensuring that the additive will be dispensed into said fluid under pressure, a first and second housing inlet and a housing outlet for introducing fluid into and out of said housing, said first housing inlet adapted to be in communication with a cold water supply outlet and the second housing inlet is adapted to be in communication with a hot water outlet, a passageway positioned in said housing conducting the fluid to said reservoir, adjustable control means in said passageway regulating the pressure of said fluid therein, adjustable control means being disposed in said reservoir outlet for regulating
